

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1. (currently amended) An information processing apparatus for executing predetermined processing in accordance with a first operation, a second operation, or a third operation, comprising:

jog dial means for enabling an operator to perform said first operation, said second operation, and said third operation;

first display control means for controlling a display, in accordance with said first operation or said second operation performed through said jog dial means, ~~the display of for displaying an image among a set of images, which are at least partially displayed on a view area of the display for the operator to select the image~~ for browsing corresponding to content recorded on a recording medium; and

reproduction means for reproducing content corresponding to said image for browsing of which display is kept in a selected state by said first display control means if said third operation has been performed through said jog dial means.

2. (currently amended) ~~An~~ The information processing apparatus according to claim 1, wherein said first display control means controls the display of said image for browsing such that said image for browsing is linearly aligned with the set of images.

3. (currently amended) ~~An~~The information processing apparatus according to claim 1, wherein said first display control means controls the display of said image for browsing such that said image for browsing is aligned with the set of images in a curve which constitutes a circle.

4. (currently amended) ~~An~~The information processing apparatus according to claim 1, wherein said first display control means controls the display of said image for browsing such that said image for browsing is spirally aligned with the set of images in a three-dimensional space.

5. (currently amended) ~~An~~The information processing apparatus according to claim 1, wherein said first display control means controls the display of said image for browsing such that said image for browsing is aligned with the set of images in a planar manner.

6. (currently amended) ~~An~~The information processing apparatus according to claim 1, further comprising:

second display control means for controlling, in accordance with said first operation or said second operation performed through said jog dial means, the display of an icon of an application program which uses said content to be reproduced by said reproduction means; and

starting means for starting, if said third operation is performed through said jog dial means with the display of an icon of a predetermined application program kept in an active

state by said second display control means, said predetermined application program of which display of an icon is kept in the active state.

7. (currently amended) ~~An~~The information processing apparatus according to claim 6, wherein, when any display of the icon of said application program is kept in the active state by said second display control means and said third operation is performed through said jog dial means, said starting means ends said application program started.

8. (currently amended) ~~An~~The information processing apparatus according to claim 1, wherein each of said first operation and said second operation is performed by rotating or turning a rotating or turning type dial.

9. (currently amended) ~~An~~The information processing apparatus according to claim 1, wherein said third operation is performed by depressing a rotating or turning type dial.

10. (currently amended) ~~An~~The information processing apparatus according to claim 1, wherein said first operation, said third operation, and said second operation are performed by switches arranged substantially in straight-line in this order.

11. (currently amended) An information processing method for an information processing apparatus for executing predetermined processing in accordance with a first operation, a second operation, or a third operation, comprising:

an enabling step for enabling an operator to perform said first operation, said second operation, and said third operation through the use of a jog dial means;

a first display control step for controlling a display, in accordance with said first operation or said second operation performed through said jog dial means, the display of for displaying an image among a set of images, which are at least partially displayed on a view area of the display for the operator to select the image for browsing corresponding to content recorded on a recording medium; and

a reproduction step for reproducing content corresponding to said image for browsing of which display is kept in a selected state in said first display control step if said third operation has been performed through said jog dial means.

12. (currently amended) AnThe information processing method according to claim 11, wherein each of said first operation and said second operation is performed by rotating or turning a rotating or turning type dial.

13. (currently amended) AnThe information processing method according to claim 11, wherein said third operation is performed by depressing a rotating or turning type dial.

14. (currently amended) AnThe information processing method according to claim 11, wherein said first operation, said third operation, and said second operation are performed by switches arranged substantially in straight-line in this order.

15-18. (cancelled)

19. (currently amended) A program storage medium for storing a computer-readable program for controlling an information processing apparatus for executing predetermined processing in accordance with a first operation, a second operation, or a third operation, said computer-readable program comprising:

an enabling step for enabling an operator to perform said first operation, said second operation, and said third operation through the use of a jog dial means;

a first display control step for controlling a display, in accordance with said first operation or said second operation performed through said jog dial means, ~~the display of for displaying an image among a set of images, which are at least partially displayed on a view area of the display for the operator to select the image~~ for browsing corresponding to content recorded on a recording medium; and

a reproduction step for reproducing content corresponding to said image for browsing of which display is kept in a selected state in said first display control step if said third operation has been performed through said jog dial means.

20. (currently amended) ~~An~~The program storage medium according to claim 19, wherein each of said first operation and said second operation is performed by rotating or turning a rotating or turning type dial.

21. (currently amended) ~~An~~The program storage medium according to claim 19, wherein said third operation is performed by depressing a rotating or turning type dial.

22. (currently amended) ~~An~~The program storage medium according to claim 19, wherein said first operation, said third operation, and said second operation are performed by switches arranged substantially in straight-line in this order.
